SUMMARY

Product Designer with 2+ years of experience designing web and mobile products, and hands-on front-end skills in React and TypeScript. Experienced in user research and discovery, in mapping journeys and flows with their states, decision points and edge cases, and in turning complex workflows into clear, accessible interfaces. Designs in Figma with components and design systems, and builds working prototypes in code when a static mock isn't enough. Work spans AI features, a job platform for Tanzania and small-business tools, including digitising paper-based processes. Works closely with product managers and engineers, and documents decisions and trade-offs so teams can build with confidence.

SKILLS

- **Research & discovery:** Gathering requirements with stakeholders, personas, journey maps, surveys,usability testing, market research, design thinking
- **Journeys & flows:** User flows with decision points, edge cases and fallbacks; UI states (default, empty, loading, error, success); information architecture; microinteractions
- **Design & prototyping:** Interaction design, wireframing, high-fidelity prototyping, design systems and reusable components, mobile-first and responsive design
- **Documentation & handoff:** Written design rationale, annotated flows, developer handoff, case studies
- **Front-end:** HTML, CSS, JavaScript, TypeScript, React, React Router, TanStack Query, Zustand, Tailwind CSS
- **Tools:** Figma, Canva, pen.dev, Affinity, Git and GitHub, VS Code, Claude

EXPERIENCE

UI/UX Designer | Dproz | Remote
September 2024 – September 2026

- Redesigned Dproz's sign-up after heavy drop-off at its 10 required questions, which also left the job recommendation AI matching with too little data. Created personas, user flows and journey maps, then designed a step-by-step wizard for mobile and resume upload for web. This raised profile completion by 40%, and users reached a complete profile in under 60 seconds.
- Designed Role Explainers within Dproz's existing design system, an AI tool that helps summarize job descriptions into short, readable bullet points and helps translate them to Swahili for the Tanzanian job market.
- Redesigned Fitcheck, an AI feature that compares a candidate's resume with a job description, after user data and recruiter feedback showed qualified candidates were being filtered out. Replaced the first version, which only listed what candidates lacked, with a three-step flow: analyse the resume, ask one question per gap, then generate a tailored, ATS-friendly PDF.
- Redesigned the profile page into Dproz Smart Profile, which builds a job seeker's profile from an uploaded resume and lets them add supporting documents and track applications in one place.
- Designed the One-Click Apply, a feature that uses Dproz Smart Profile to send applications on the candidates behalf from their own email, removing repeated form-filling and document re-uploads to improve application completion rates.
- Designed the AI Resume Feedback for mobile and web, with a loading state that shows each

analysis step and results that give feedback and a suggested edit for every resume bullet, grouped by section.
- Led UI/UX design for ShopXray (MkatabaHQ), turning shops' paper notebook records into digital flows for recording visits, logging expenses and closing the day, with any cash shortfall shown before close. Also designed flows for appointments and staff pay cycles, keeping all shop management in one place.
- Prototyped CareerfyHQ, a product that lets companies claim and brand their company pages on Dproz, giving them a credible site to post jobs and giving candidates a verified place to apply.
- Designed the Hiring Applications Tracker's kanban board, table and candidate details drawer, so recruiters could track candidates across hiring stages, with AI screening to inform their decisions.
- Worked closely with product managers, developers and stakeholders to align designs with business goals, and maintained responsive web pages and branded social media content that increased Dproz's audience reach and engagement.

Freelance UI/UX Designer | Remote
January 2023 – August 2024

- Gathered client requirements and turned them into user flows, wireframes and prototypes for mobile and web apps.
- Validated designs with personas, surveys and usability testing, then iterated on the findings.
- Worked with developers and product teams to keep builds consistent with the design.

PROJECTS

Game Hub | Personal project | Live site

- A game discovery app built on the RAWG API, with search, genre and platform filters, sorting, infinite scroll, and trailers and screenshots on every game page. Built with React, TypeScript, TanStack Query, Zustand and React Router.

Portfolio | Live site

- Designed, then built in React with TypeScript, React Router, Tailwind CSS and shadcn/ui, including a component shown as its design and its code side by side.

Case studies and projects

- Dproz
- Resume Fitcheck
- ShopXray
- Hiring Applications Tracker
- AI Resume Feedback
- Tours and Travel Site (Safari Spirits)

EDUCATION

Bachelor of Science in Computer Technology – Murang'a University of Technology, **2022**

CERTIFICATIONS

- **Web Development Bootcamp**, Udemy
- **React 18 Course**, Udemy

LANGUAGES

- Swahili – Native / Bilingual Proficiency
- English – Native / Bilingual Proficiency
